

ABSTRACT

This invention relates to a life saving medicament for critically ill patients and a method of treatment. The composition is a pharmaceutically effective amount of a blood glucose regulator which is used to control the blood glucose level.

1. A method of treating a critically ill patient, comprising:
 (a) administering to the patient a pharmaceutically effective amount of a blood glucose regulator;
 (b) monitoring the blood glucose level of the patient;
 (c) adjusting the amount of the blood glucose regulator administered to the patient based on the monitored blood glucose level;
 (d) repeating steps (b) and (c) until the blood glucose level of the patient is controlled.
